This method will help you to boost your confidence to pass the SAP Data Integration with SAP Data Services certification with a better score.

C_DS_42 Questions and Answers Set

Question: 1

You are designing an SAP Data Services process. This process must execute ONLY if a defined expression is true. Which object allows you to accomplish this task?

Please choose the correct answer.

- a) Validation transform
- b) Case transform
- c) Try/catch block
- d) Conditional

Answer: d

Question: 2

You have a Salary table containing departments (DEPARTMENT column) and salaries (SALARY column). How do you calculate the average salaries for each department in the Query transform in SAP Data Services?

There are 2 correct answers to this question.

- a) Enter avg(SALARY) on the Mapping tab.
- b) Specify the DEPARTMENT column on the GROUP BY tab.
- c) Enter avg(SALARY) on the SELECT tab.
- d) Specify the DEPARTMENT code on the WHERE tab.

Answer: a, b

Question: 3

Which SAP Data Services transforms would you use in a dataflow to load a slowly changing dimension of type 2?

There are 3 correct answers to this question.

- a) Effective_Date
- b) Row_Generation
- c) Table_Comparison
- d) Key_Generation
- e) History_Preserving

Answer: c, d, e

Question: 4

You want to restore an older version of an object found in a shared object library. Where do you find this version of the object in SAP Data Services?

Please choose the correct answer.

- a) In the Profiler repository
- b) In the Auditing repository
- c) In the Local repository
- d) In the Central repository

Answer: d

Question: 5

Your customer has rules requiring that each row in the source be tested for certain criteria in a specific order. When a row passes one criteria, it should NOT be tested for the next criteria.

How should this be implemented using SAP Data Services transforms?

Please choose the correct answer.

- a) Use a Validation transform and add the rules in the proper order for each single column.
- b) Use a Case transform with the Produce Default Output with Label option enabled, and enable the Preserve Expression Order checkbox.
- c) Use a Case transform with the Row Can Be True for One Case Only and Preserve Expression Order options enabled.
- d) Use multiple Query transforms with one WHERE? clause per rule. Connect all queries to the source.

Answer: c

Question: 6

An SAP Data Services dataflow contains multiple transform objects. The target table contains some unexpected results for one column.

How can you review a sample of the data as it passes through each transform?

Please choose the correct answer.

- a) Execute the job and review the monitor during execution.
- b) Execute the job and review the target table in SQL.
- c) Execute the job that enables the Trace Optimized Dataflow property.
- d) Execute the job in debug mode with breakpoints set and enabled.

Answer: d
